

Stop, important information below.

MycoMaxx is a highly concentrated, eight specie blend of Arbuscular Mycorrhizal Fungi. **MycoMaxx Plus** adds several strains of bacterial fungi to maximize mineral solubilization and support a properly working Rhizosphere. This combination of fungi and bacteria will greatly increase root systems, fertilizer efficiency, and water uptake. The **MycoMaxx** Product line is formulated to restore soil health, plant health, and soil functionality to the biologically degraded soils throughout North America.

Benefits

- Increase root surface area by 50-100x
- Increase nutrient and water uptake
- Increase soil health, structure and tilth
- Protects against root rot
- Manages Cyst Nematodes naturally
- Unlocks up to 80% of the plants Phosphorus
- Naturally brings in up to 20-40lbs of Nitrogen yearly,
- Reduces fertilizer dependency and leaching.
- Increases drought resistance
- Reduces side dressing or Y-dropping needs
- Reduces erosion by increasing the glomus strains
- Reduces plant stress and disease
- Greatly improves yield potential

Bacterial Benefits

- Phosphorus solubilizing bacteria to bring in 10-20lbs or more P annually
- Potassium solubilizing bacteria to bring in 10-20lbs or more K annually
- Greater tolerance to stress and protection of phytopathogens to promote growth stimulation
- Greatly increases the solubilization of micro and macro minerals and nutrients
